

ABSTRACT OF THE DISCLOSURE

1
2 A fingerprint recognizing display system including fingerprint recognizing means in a panel
3 of a display apparatus and an operating method thereof, wherein a fingerprint of an user is read and
4 a program supported by a computer is allowed to be operated only if the read fingerprint is registered
5 in fingerprint data of the computer. A display apparatus recognizes a fingerprint of the user through
6 a fingerprint recognizing module included in the display apparatus and outputs recognized
7 fingerprint data by using a communication device included in the fingerprint recognizing module.
8 A computer main body includes a fingerprint data base having data of more than one fingerprint and
9 a fingerprint verifying unit, and operates a program after deciding whether fingerprint data input
10 from the display apparatus is an approved fingerprint through the fingerprint data base and the
11 fingerprint verifying unit.
